

September is Pain Awareness Month

Defined by American Pain Society and International Association for the Study of Pain, chronic pain is defined as pain that persists beyond the normal tissue healing time which varies from 3 – 6 months. When left untreated, chronic pain can become more complex in its pathophysiology. Patients with chronic pain are often at risk for worsening chronic diseases, comorbid depression, anxiety and stress, dependence on pain medications, lost wages, and reduced quality of life and functionality to name a few. When managing chronic pain, it is important to minimize or avoid the long-term complications. Depending on the circumstances and extent of the injury or disease, the overall goal is to relieve symptoms associated with the chronic pain by targeting the source of the pain.

RST-SANEXAS Electric cell-Signaling Technology (EcST) can assist in reducing pain associated with these types of conditions or injuries: peripheral neuropathy (Charcot and CIPN), fibromyalgia, CRPS, back, joint, and spine, osteoarthritis, neuromuscular disorders, headaches, sports injuries, etc.

Depending on the proper diagnosis, the RST-SANEXAS neoGEN® device can begin with up to 20 varied parameter treatments with the individual treatment time ranging from 10-30 minutes per session 2 to 3 times per week. Depending on the patient's physiology and lack of reparative energy in their bodies, a few treatments are cumulative and may not be noticeable until weeks later. The length of sessions will depend on the patient's re-evaluation and their verbal feedback reporting pain relief, improved sleep, increased activity, better balance and need for less pain medication. There are times when the patient may feel like their pain got worse, but this is normal because nerves are repairing.

RST-SANEXAS neoGEN® EcST will increase and improve circulation, help reduce inflammation and edema, provide muscular re-education, strength, and balance, relieve chronic long-term, intractable pain, improve wound care, and enhance rehabilitation.

#1 in Pain Management

Chronic pain is the most underestimated healthcare problem worldwide.

“For all the happiness mankind can gain, is not in pleasure, but in rest from pain” - John Dryden (1631-1700)

RST-SANEXAS neoGEN-Series®

We dedicate this page to Ralph Duquette from Portland, Maine. Before we talk about Ralph today, we want to provide you with a little backstory about him and how he heard about RST-SANEXAS Electric cell-Signaling Treatment (EcST). Ralph's story starts over 9 years ago when serious health issues affected his life.

Part 1: In October 2012 Ralph was diagnosed with stage 4, acute myeloid leukemia and was hospitalized. Ten day later and after his first round of chemotherapy, hospital staff found Ralph on the floor with no pulse. CPR was started – after 15 minutes they got a pulse. After being comatose, ventilated, and extubated - 3 days later Ralph took a breath but remained comatose until December 2, 2012, then he **WOKE UP!** He didn't remember his health crisis and found he was unable to move his legs. When the resident told him about his medical history, he thought he had entered the Twilight Zone. After 3 months, he was discharged to home care and given less than 6 months to get his affairs in order, but his expiration dates came and went. His health issues continued with a mini stroke, respiratory arrests, insertion of a feeding tube, loss of sight in his left eye, and was bed-ridden, etc.

Part 2: His only daughter, Heather, was getting married in 2015 and he wanted to walk her down the aisle and officiate the ceremony. Mind you, he is still bed-ridden. To achieve this goal for his daughter's big day, his physician agreed to put together a team to help him. Ralph asked that his rehabilitation be done secretly without family/friends' knowledge. For 6 months he had a team of Occupational and Physical Therapist, Nutritionist, Social Worker, and Psychologist come to his house to provide therapy for him while his family was at work. It started with simply sitting up on the edge of his bed to taking a few steps across the room. He worked hard and eventually improved to practicing outside the 50 foot walk he would make with Heather the day before the wedding October 10, 2015. His only request was there would be no videos taken in fear of falling or embarrassing his daughter as he walked her to the alter; however, his younger brother was not aware of Ralph's request and videoed the entire event. It ended up on YouTube and 2 days later the phone started to ring. Unbeknown to Ralph, the video went viral prompting TV vans, Radio stations, and newsletter executives from a tri-state area to show up outside his house the following day requesting interviews. To date his video has over 4 million views worldwide!

Fast forward 6 years later to Today: January 2021 Ralph saw a small ad about a new clinic, New Life Wellness in Windham, ME offering neuropathy treatment. He called, set up an appointment, and drove 50 miles for an RST-SANEXAS neoGEN® Electric cell-Signaling Treatment. He had treatments 2x's per week in March and April. Towards the middle of April during the middle of the night, he woke up to his legs feeling like they weighed a ton. He said **"something is happening with my legs"** and decided to return to New Life Wellness for more treatments.

Ralph wanted to learn more about how EcST technology was helping to improve the quality of his life when everything else he tried over the past years were unsuccessful. He traveled to Las Vegas to receive more RST-SANEXAS neoGEN® treatment to help focus on improved outcome. He arrived using his motorized wheelchair for his consultation with a physical therapist who planned to work with him throughout the week on a customized treatment plan. Once he was comfortable, his first treatment began on his legs and arms. The following day, he left his wheelchair at his hotel and walked without assistance to receive his next series of treatments. His ability to walk up and down steps albeit slow was a definite improvement. He felt certain that returning home and receiving more RST-SANEXAS neoGEN® treatments would benefit his muscle re-education to his legs and arms and overall general health. When all the odds were stacked against him, Ralph has survived when his diagnosis was considered extremely grave and seemed impossible. He looks forward to returning to a better quality of life. All of us at RST-SANEXAS wish him continued good health and a long and happy quality of life. **HOPE is powerful!!**

Day 1

Day 2

SEPTEMBER 2021 SPECIAL

VIVA LAS VEGAS SYMPOSIUM VIDEO

NOW
AVAILABLE

This RST-SANEXAS video was produced and edited from the 2-day VIVA LAS VEGAS SYMPOSIUM EVENT. The video will be provided to you on a thumb drive and costs \$250. For the Viva Las Vegas Symposium attendees, ask about our Paid Attendees discount. Please place your order now with Debbie.

Here is a brief description of what is on the Viva Las Vegas Symposium Show Video. Over the 2-day event, various speakers spoke on these topics:

1. Dr. Richard Sorgnard, RST-SANEXAS welcome and EcST History
2. How to Serve Your Patients Better with RST-SANEXAS and Maximizing Your Clinic Profits
3. PT Rehab Theory and Wound Care Protocols
4. Advance Pain Management
5. Diagnosis of Small Fiber Peripheral Neuropathy
6. Diagnostic, Testing, Reporting, and Billing
7. Troy Barsky - A Washington, DC Health Care Lobbyist Discussing Medicare
8. Vasodilation with Nitric Oxide – VasoHealth Product Introduction
9. Quantum Resonance and Specific Tissue Targeting
10. RST-SANEXAS New Product Introduction
11. Question and Answers
